NISSAN NP300 PICK UP Performance

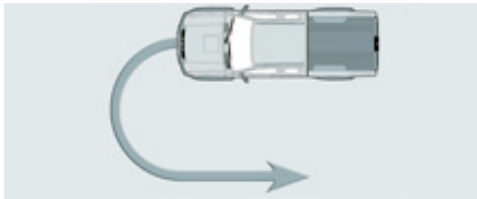

All the power you need

DRIVING PERFORMANCE

4x4 capabilities

The NP300 leads its class for 4x4 agility. Reassuring stability and a low centre of gravity give it a maximum lateral inclination of 48°. And tackle gradients up to a dizzying 39°. If there's a job to be done, NP300 Pickup will take you there.

Turning circle

The NP300's class-leading turning circle of just 11.2m makes manoeuvring easier in town, on cramped construction sites and tortuous trails.

Powerful engine

The powerful yet frugal 2.5 litre direct injection diesel produces 133HP with 304Nm torque along with outstanding fuel economy. A five speed gearbox ensures you have the right ratio for all duties, from off-road hauling to quiet motorway cruising.

RUNNING COST

Nissan reliability

When your pickup's in for servicing, it's not earning its keep. Exacting build standards and rigorous quality control mean that your NP300 Pickup is precision-made to endure hard work and go long distances between services – 18,000 miles or one year, whichever comes first.

Going the distance

The NP300's engine has been engineered to provide exceptional fuel economy despite Euro 4 legislation. And with its big 75 litre fuel tank, you'll go even further between refills.

Tough cookie

With rugged independent front suspension and heavy duty rear leaf spring suspension, NP300 Pickup can handle the most demanding loads and terrain.

NISSAN NP300 PICK UP Performance

Safety and Security

Safety first

SAFETY AND SECURITY

Safety first

NP300 Pick Up is well equipped to deal with a challenging world. The powerful braking system features ventilated front discs, large rear drums and a load-sensing valve that automatically adjusts brake performance to the weight you're carrying.

Airbags

Driver and passenger airbags are standard on all versions, and all occupants have three-point pretensioner seatbelts, with two-point belts for Single Cab and Double Cab centre passengers.

ACTIVE SAFETY

ABS (Antilock Brake System)

ABS helps prevent wheels from locking up when braking on a slippery road by electronically balancing the braking force between all four wheels to match the level of grip of each one. Standard on all NP300.
